Ada Byron Lovelace And The Thinking Machine

Synopsis

Ada Lovelace, the daughter of the famous romantic poet, Lord Byron, develops her creativity through science and math. When she meets Charles Babbage, the inventor of the first mechanical computer, Ada understands the machine better than anyone else and writes the world's first computer program in order to demonstrate its capabilities.

Book Information

Hardcover: 40 pages

Publisher: Creston Books (October 13, 2015)

Language: English

Grade Level: Kindergarten and up

Customer Reviews

Gr 1-4 "This well-written and handsomely illustrated picture book biography details how Ada Lovelace Byron was able to write the first computer program more than 100 years before the first computer was built. Ever since she was a young girl, Lovelace was fascinated by numbers. As she was growing up, she filled her journals with ideas for inventions and equations. Her mother provided tutors to further develop Lovelace's passion for mathematics. When one of these tutors invited Lovelace and her mother to a gathering of scientists, she met the famous mathematician and inventor Charles Babbage. He was so impressed by Lovelace's knowledge that he invited her to his laboratory, where she learned about his idea for an Analytical Engine, a mechanical computer that would solve difficult problems by working them through step-by-step. She realized that this "computer" would only work if it were provided with detailed instructions, and after much work, she succeeded in writing what is now referred to as the first computer program and in creating the

profession of computer programming. The descriptive text and dazzling spreads work seamlessly to provide a sense of Lovelace's growing passion for mathematics and invention. The illustrations reflect the 19th-century setting and contain numerous supporting details. For example, gears that will eventually become part of the design of the Analytic Engine are featured throughout: in the corners of the title page, on the pages of Ada's journals, and on Babbage's chalkboard. VERDICT An excellent addition to STEM collections.â "Myra Zarnowski, City University of New York

What a fascinating story! This vividly-written, gorgeously illustrated picture book biography brings to life the personality and amazing accomplishments of the astonishing 19th century female mathematician who conceived of the idea of computer programming long before there were even computers and is literally the "mother of computer science." I can't wait to share it with my students!—Â Carol Simon Levin, Youth Services Librarian and Historical Impersonator of "Fascinating Women History Forgot""I've been an admirer of Ada Byron Lovelace for years and a book that introduces her to young readers is long overdue. While women are tragically underrepresented in computer science today, the true pioneer of the field was Ada, whose mastery of numbers and determination led to her making a permanent mark. Let's hope that this wonderful book not only delights, but inspires many girls to pursue Ada's ideals."—Â Steven Levy, author of Hackers"The story of Ada Byron Lovelace and the Thinking Machine is a page-turner and will appeal to children, adults, scientists, and non-scientists alike. This book begins to fill the gap in the literature about girls and women in mathematics and computer science. The harmony of thorough research, beautifully written prose, portrayal of theory, practice, romanticism, and passion that accompany the creation of a complex scientific invention were wonderfully woven together, just like the mechanics of the "Thinking Machine" itself. I was reminded of the excitement of becoming a mathematician!â •—Â Ellen Gethner, professor of computer science and mathematics at the University of Colorado Denver"Meet Ada Byron Lovelace in this fascinating tale of the world's first computer programmer. Beautifully detailed illustrations bring Ada's world to life for young readers."— Kathy Haug, Association of Children's Librarians of Northern California"This enchanting book brings to vibrant life the biography of Ada Lovelace, a girl who loved numbers and dreamed up the world's first computer program before computers existed. By rescuing Ada's story from the overbearing shadow of her famous father, poet Lord Byron, Laurie Wallmark and April Chu provide a valuable role model for all young women destined to pursue careers in math and science."—Â Steve Silberman, author of NeuroTribes: The Legacy of Autism and the Future of Neurodiversity"Two hundred years after her birth in 1815, the world is finally beginning to pay

attention to Ada Byron Lovelace, considered by many to be the inventor of computer programming. Computer scientist and debut author Wallmark introduces her subject as a child fascinated by numbers, lucky enough to be born to a geometry-loving mother with the means and inclination to nurture her daughter's talents. She focuses on her subject's adolescence, choosing details that highlight Lovelace's development as a mathematical genius. The girl sketches models for flying machines, works endless calculations to compute the wings' power; young readers will sympathize as they hear how "writing for so long made her fingers hurt"; and studies a toy boat to see how minute adjustments to its sails affect its speed. A bout of measles that leaves her temporarily blind and paralyzed serves to further hone her brilliance, as her mother drills her with math problems. She is perfectly positioned for her fateful meeting with Charles Babbage, whose proposed Analytical Engine prompts her to write the algorithm (described as "a set of mathematical instructions") that becomes the world's very first computer program. Chu's illustrations, digitally colored in a deep, jewel-toned palette, accompany the lively prose. Lovelace is a Pre-Raphaelite beauty set against a backdrop of teeming Victorian interiors littered with diagrams and pages of figures; children will enjoy spotting the girl's loyal cat. A splendidly inspiring introduction to an unjustly overlooked woman. (author's note, timeline, bibliography) (Picture book/biography.

5-8)"— Kirkus Reviews, starred review"Wallmark makes her children's book debut with an inspiring and informative account of 19th-century mathematician Lovelace, who is considered to be the world's first computer programmer. Lovelace's mathematical passions are evident from the first pages, as Chu shows the infant in a bassinet, reaching for a mobile of stars and numbers (she's adjoined by her mother, whose own interests earned her the nickname "The Princess of Parallelograms," and her father, poet Lord Byron). Wallmark moves swiftly through Lovelace's life, facing obstacles that included a bout of measles that temporarily left her blind and paralyzed, as well as societal attitudes toward women in the sciences. Lovelace found a kindred spirit in inventor Charles Babbage, eventually creating "the world's first computer program" for his Analytical Machine. Chu brings the same grace and precision to this book as she did to *In a Village by the Sea*, and her finely detailed pencilwork is ideally suited to the schematics, blueprints, and mechanical implements that surround Lovelace and Babbage as they work, not to mention the stately apparel and architecture of their Victorian surroundings."--Publishers Weekly, STARRED review"Laurie Wallmark has written an exciting tribute worthy of this amazing woman. The vividly written narrative reads like a story and keeps you turning pages. The illustrations by April Chu are gorgeous, and perfectly complement the text. An author's note and timeline at the end of the book give more details about Ada Lovelace's life and work."--Wands and Worlds Reviews"Soft, delicate

yet detailed illustrations evoke Adaâ™s wonder and accomplishments, with a final spread depicting a spacecraft—a flying machine come true—running a computer language called Ada in her honor. Back matter offers more information on Adaâ™s life and the worldâ™s first computer program. A beautiful tribute to this female computer pioneer."--Booklist, STARRED review"This picture book is a visually rich peek into Victorian high society, an inspiring tribute to the life of the mind, and a fine introduction to Ada Byron Lovelace, a lesser-known pioneer in the field of computer science. Discover: A visually stunning picture-book biography of Ada Byron Lovelace, a 19th-century English mathematician whose ideas contributed to the invention of the modern-day computer."--Karin Snelson, children's and YA editor, Shelf Awareness"Wallmark brings the story alive with grace and clarity; she never showboats, but she always finds the right word or phrase. Chu's vivid illustrations tell a story unto themselves, one of both mathematical precision and romantic flights of fancy. The image of Ada's sketches flying off the page is particularly arresting. A great choice for girls who love math or science."--Chicago TribuneEureka Gold Medal Winner for Children's Nonfiction--California Reading AssociationBooklist Top Ten Books in Science and HealthBooklist Editor's Choice: Books for Youth 2015Outstanding Science Trade Books for Students K-12 for 2016, National Science Teachers Association (NSTA) and the Childrenâ™s Book Council"Ada Byron Lovelaceâ™s fascinating, overlooked story is just beginning to get the recognition it deserves, and this handsome picture-book biography does it justice. We meet the daughter of Lord Byron, the famous Romantic poet, as a young girl besotted by numbers and encouraged to pursue mathematics by her mother, who loved geometry. A bout with measles leaves her blind and bedridden, but she uses the time productively: “Mama posed ever harder problems, and Ada solved them all.â•When she recovers and later meets the mathematician and inventor Charles Babbage — who has plans for a “thinking machine,â• his Analytical Engine, but hasnâ™t actually built it — Adaâ™s destiny is set in motion. In her debut picture book, Wallmark manages to create an atmosphere of suspense as she clearly lays out the steps Ada took to come up with the first algorithm that could allow a machine to solve complex math problems. The digital art by Chu (“In a Village by the Seaâ•) adds to the storyâ™s intellectually riveting quality, making Ada and her refined world look somehow both pre-Raphaelite and cool."--New York Times"The combination of Wallmarkâ™s passionate text and April Chuâ™s superb bold illustrations make this book stand out from the pack. Children will appreciate the fact Chu included a playful cat in the illustrations, adding interest and continuity from page to page. Ada Byron Lovelace and the Thinking Machine is likely to resonate with kids interested in computers, math, and engineering and inspire some who havenâ™t yet found their passions. History buffs,

particularly those interested in women's history, will also want to check it out."--Nonfiction Monday Best Fiction for Children & Teens"This beautifully illustrated biography introduces future programmers to the life of Ada Byron Lovelace, the child of Lord Byron, who loved inventing things. Your little one will get inspired as they learn about "The Princess of Parallelograms" and how her passion for math and science as a child led her to become the world's first computer programmer."--Today's Parent"This beautifully illustrated book tells the story of Ada Byron Lovelace, daughter of Lord Byron the poet, and how she grew up fascinated by numbers and what she could make them do. When she was bedridden by measles, her interest in mathematics grew even more.. When she became a young woman, she meets Mary Fairfax Somerville, a well-known female scientist and mathematician. Through Somerville, Ada met Charles Babbage, who had invented the first computer/calculator. Though Babbage continued to develop the mechanics of the Difference Engine, it was Ada who figured out how to program it in a way that made it more efficient. We live in a world where math heroes often fly under the radar, and where most elementary children have never imagined that a female mathematician could make a difference in the world -- let alone in the world of the early 1800s. Math teachers who care about their female students should thank Laurie Wallmark and April Chu for creating this book, then they should immediately order this book for their classroom. Right away."-- Bill Boerman-Cornell, professor of Children's Literature and Disciplinary Literacy, Trinity College, Illinois"The 510s shelves are hardly in danger of collapsing under the weight of children's books about women mathematicians, and librarians will welcome this picture book biography of Augusta Ada Lovelace, whose assistance to Charles Babbage resulted in what is credited as the first computer program. Wallmark offers a smooth narrative that blends the human-interest details of her life--the absence of her famous poet father, the influence and support of her mathematically gifted mother, her temporary blinding and paralysis from measles--with the importance of her own work, particularly her invention designs and the algorithms she wrote that would theoretically enable Babbage's Analytical Engine to function. While Lovelace's achievement gets the spotlight in the main text, Wallmark acknowledges in a closing note that her accomplishments were hidden from most contemporaries behind the cryptic "A.A.L." with which she signed her work. Wallmark also effectively explains the mathematical innovation in simple terms, stressing Lovelace's knack for breaking down complex tasks into orderly steps, which would enable machines to perform complex calculations more easily and quickly than the most nimble person armed only with a pencil. Chu's illustrations, "colored on an Analytical Engine," are occasionally stiff, but they're an intriguing mashup of Pixar-style polish and romantic Victorian detail. An appended timeline, which hints at further

landmarks of Lovelaceâ™s adult life, may encourage readers to seek out more information via the bibliography; a note on Ada Lovelace Day should spark celebratory activities, especially among the STEM girls, in October."--Recommended, *The Bulletin of the Center for Children's Books*"This well-written and handsomely illustrated picture book biography details how Ada Lovelace Byron was able to write the first computer program more than 100 years before the first computer was built. . . .The descriptive text and dazzling spreads work seamlessly to provide a sense of Lovelaceâ™s growing passion for mathematics and invention. The illustrations reflect the 19th-century setting and contain numerous supporting details. For example, gears that will eventually become part of the design of the Analytic Engine are featured throughout: in the corners of the title page, on the pages of Adaâ™s journals, and on Babbageâ™s chalkboard. **VERDICT** An excellent addition to STEM collections.–Starred Review, *School Library Journal*Outstanding Book--Association of Children's Librarians of Northern CaliforniaOutstanding Merit, *Bank Street Best Children's Book of the Year*"This extraordinary bio of a Victorian-era mathematician who anticipated computer programming is fascinating and easy to read. Author Laurie Wallmark tells the story deftly, highlighting just the right human and dramatic detail, and April Chu's art brings Ada and her passions vividly to life."--Common Sense Media

When my little guy came home from school the other day talking about Ada Byron Lovelace, I knew I needed to get him a book about her. I'm so glad I got this oneÃ¢Â"an award winning picture book that's truly a work of art. The cover is even more gorgeous than it looks online. April Chu's illustrations are luminous. *Ada Byron Lovelace and the Thinking Machine* is a book for all ages. I highly recommend it.

I loved the illustrations. The start of the story was confident and strong. Although the ending I'm sure is true, it was a let-down. For a book that should inspire girls this starts out very well, but ends on a bit of a flat note.

I bought this for my daughter, Ada, to get to know her namesake. It is, as far as I can tell, historically accurate and gives a beautiful overview of her life. Enough for an eight year old to absorb before she sits down with a chapter book later this year.

Read it my 1st grade class. Beautiful story.

Fantastic book on how a great women excelled in understanding computing and who lived 100 years ago. A great book to impact young women as well as our society focuses more on STEM and encouraging young girls to pursue math and sciences.

The book was very informative and interesting.

Love this. Lovely artwork. Wonderful telling of Ada's intellect and life. Well done.

Great read for STEM! Inspiring for girls.
