Communicable Diseases: A Global Perspective (Modular Texts Series)

Synopsis

Communicable diseases are the main health problem encountered in developing countries, whether they are food-borne, respiratory or transmitted by insects, but are quickly becoming a global issue. By grouping diseases by means of transmission and covering principles of epidemiology for each disease, this textbook addresses both basic principles and advanced concepts, illustrated with focus boxes, bullet lists and figures. Summaries and further reading sources accompany each chapter. This fourth edition of Communicable Disease Epidemiology and Control is fully updated throughout and includes new chapters on integrated disease management and the increased risks of disease among pregnant women. The latest research on the control of communicable diseases is included, featuring maps of the latest disease distribution and assisting in identifying the best method of control. An essential resource for students and lecturers in public health and medical sciences, this book will also assist doctors and health workers in their management of this fast-changing area.

Book Information

Series: Modular Texts Series

Paperback: 344 pages

Publisher: CABI; 4 edition (September 13, 2012)

Customer Reviews

Roger Webber is formerly of the London School of Hygiene and Tropical Medicine, UK.

This book is a very informational and interesting book.

I was a little worried that the book would make it here early enough for me to use it for class, but it did. The book came way before time and was in perfect condition just as described by the seller. Would purchase from again.
