Finite Mathematics With Applications In The Management, Natural, And Social Sciences Plus NEW MyMathLab With Pearson EText -- Access Card Package (11th Edition)

Synopsis

ALERT: Before you purchase, check with your instructor or review your course syllabus to ensure that you select the correct ISBN. Several versions of Pearson's MyLab & Mastering products exist for each title, including customized versions for individual schools, and registrations are not transferable. In addition, you may need a CourseID, provided by your instructor, to register for and use Pearson's MyLab & Mastering products.

Packages Access codes for Pearson's MyLab & Mastering products may not be included when purchasing or renting from companies other than Pearson; check with the seller before completing your purchase.

Used or rental books If you rent or purchase a used book with an access code, the access code may have been redeemed previously and you may have to purchase a new access code.

Access codes Access codes that are purchased from sellers other than Pearson carry a higher risk of being either the wrong ISBN or a previously redeemed code. Check with the seller prior to purchase.

-- **Finite Mathematics with Applications in the Management, Natural, and Social Sciences** presents sound mathematics in an understandable manner, proceeding from the familiar to new material and from concrete examples to general rules and formulas. The Eleventh Edition retains its focus on real-world problem solving, but has been refreshed with revised and added content, updated and new applications, fine-tuned and newly-integrated pedagogical devices, and enhanced exercise sets.

Marge Lial (late) was always interested in math; it was her favorite subject in the first grade!

Marge's intense desire to educate both her students and herself has inspired the writing of numerous best-selling textbooks. Marge, who received bachelor's and master's degrees from California State University at Sacramento, was affiliated with American River College. An avid reader and traveler, her travel experiences often find their way into her books as applications, exercise sets, and feature sets. Her interest in archeology lead to trips to various digs and ruin sites, producing some fascinating problems for her textbooks involving such topics as the building of Mayan pyramids and the acoustics of ancient ball courts in the Yucatan. Â Thomas W. Hungerford received his bachelor's degree from Holy Cross and his Ph.D. from the University of Chicago. He taught for many years at the University of Washington (Seattle) before moving to Cleveland State University in 1980. He has been at St. Louis University since 2003. He has written a number of research articles in algebra and several in mathematics education. Dr. Hungerford is the author or coauthor of more than a dozen mathematics textbooks, ranging from high school to graduate level, several of which are published by Addison-Wesley. He is active in promoting the effective use of technology in mathematics instruction. Dr. Hungerford has also been a referee and reviewer for various mathematical journals and has served on National Science Foundation panels for selecting grant recipients. Â John P. Holcomb, Jr.Â received his bachelor's degree from St. Bonaventure University and his Ph.D. from the University at Albany, State University of New York. He is professor and chair and frequently publishes with researchers in a variety of disciplines where he provides statistical analysis. Dr. Holcomb has also authored several papers in statistical education and is very active in the American Statistical Association and the Mathematical Association of America. He was named a Carnegie Scholar in 2000 by the Carnegie Foundation for the Advancement of Teaching and Learning and in 2003 received the Waller Award from the American Statistical Association for outstanding teaching of introductory statistics.Â Â Bernadette MullinsÂ received her bachelor's degree from Western Illinois University and her Ph.D. from the University of Iowa. She is currently professor of mathematics at Birmingham-Southern College in Birmingham, Alabama, where she arrived in 2000. She has published numerous articles in the fields of commutative ring theory and mathematics education. She has served as co-investigator for several National Science Foundation grants related to improving mathematics education. Dr.

Mullins has won four awards for her excellence in teaching, including the Bob Whetstone award at BSC. Throughout her career, she has been active in Project NExT (New Experiences in Teaching) and the Mathematical Association of America, and was elected Alabama State Director of the MAA in 2013.

From what I have used of it so far, it is a good math book. My two problems I have with the book are that it 1: doesn't give enough examples of some of the concepts before expecting you to be able to understand them and work out the related problems, and 2: in the appendix, it only lists the solutions to the odd numbered questions. Otherwise, it works very well in addition to my professor's lectures (although without my professor's explanations, I wouldn't be able to understand quite a few of the concepts in the book).

Nice book

Used in school.

the book was ok, the teacher sucked!

Excellent, thank you. Comprehensive and Detailed.

Perfect shipping and was the textbook that I needed for class. It was hardback which was a plus. Not much else to say other than everything went smoothly.

Great book for the finite math class. Also loving to have the prime advantage on the rental.

Was basically brand new condition. Only thing that showed it had been used before were the stars someone had put on certain sections of the book.
