# I Beat Cancer Holistically: Protocols For Breast, Colon, Lung And Prostate Cancer

## Synopsis

Did you know the medical community only treats the symptoms of cancer, and it is your responsibility to treat the cause? In May 2005, Daniel Goldstone received the shock of his life when he was diagnosed with advanced prostate cancer. Nine months after traditional treatment, his cancer returned with a vengeance-the tumor was growing at 300 percent a month. After researching all the other traditional treatments, which gave him a 29 percent chance of surviving another four years and would drastically reduce his quality of life, he decided to take an alternative route. Today, Daniel is 100 percent in remission due to his holistic approach. His previous book, *Advanced Prostate Cancer and Me*, has helped many people around the world beat prostate cancer but, over the course of the years, he has discovered that with a few modifications his five main ingredients are just as effective for breast, colon and lung cancer as well. In 2011, he recruited people with different stages of cancer to test the effect of his protocol and the results were tremendous, which motivated him to do this book. Daniel's mission "or calling" in life now is to help others beat the beast!

## Book Information

Paperback: 90 pages

Publisher: Wasteland Press (October 30, 2012)

Language: English

## Customer Reviews

Not very good, and a little on the harsh side when it comes to whose "fault" cancer is. I really could have done without being blamed for my cancer. Anyway, here's the gist of the book, which is very short and not well written or researched: 1. Get right with God or a higher power 2. Meditate every day and believe you are going to beat the cancer 3. Surround yourself with positive people and

incorporate a positive attitude<sup>4</sup>. Detoxify your body with Flor Essence tea<sup>5</sup>. Take supplements for your immune system (vit. D-3, Lycopom, turkey tail mushroom, vit. C)<sup>6</sup>. Change your diet to an anti-inflammatory one<sup>7</sup>. Realize that having cancer is your fault and modify your lifestyle (no, I'm not kidding about this one)

My husband has advanced, metastasized prostate cancer and went on the protocol in Daniel Goldstone's book. My husband was told by local doctors in April of 2012 that within the next 18 months he will succumb to his cancer. He started on this program in August of 2012 and by November of 2012 his PSA stopped climbing. The cancer had been in remission, but came back with a vengeance. That is when he went on this program. I believe it was the supplement program that stopped the drastic climb of his PSA. These products can be purchased online or at any health food store. In March 2013, he will be getting a complete check up and I will keep you posted as to what is happening with the cancer. He's feeling better every day. For anyone with any kind of cancer, I recommend you read the book. You have everything to gain and nothing to lose. Wife of a cancer patient who is feeling a lot better.

The book gives you a detailed blueprint for what you need to do. There is no equivocation and no hedging. Just an honest approach to a topic that most people never even think about. It will force you to rethink your choices, not only in terms of medical options, but also in terms of diet and lifestyle. If you are diagnosed with cancer, you need this resource to give you options. If you are trying to prevent cancer, you need this resource to give you information that very few other people are making available. Highly recommended.

The book is an easy to read book with only 78 pages. There are several procedures covered that are easy to follow with good explanations. Also the book covers why you should be using or avoiding certain products. There is also a list of various recipes for a specific type of cancer. Everything sounds good, but at this time I have no experience if the procedures work or not.

Very informative. Were trying several things in there. Hoping and praying it helps my husband

Not very good...although it does have some interesting points of view, it is terribly written.

Diagnosed with prostate cancer, already spread but no symptoms. Good info to consider when

facing diagnosis. Mostly antidotal but backed by some legit studies.

I love it
