# Where Is Our Solar System?

## Synopsis

Readers will want to grab a telescope and explore the night skies after finishing this overview of our solar system. Our solar system consists of eight planets, as well as numerous moons, comets, asteroids, and meteoroids. For thousands of years, humans believed that Earth was at the center of the Universe, but all of that changed in the 17th century. Astronomers like Nicolaus Copernicus, Galileo Galilei, Johannes Kepler, and Isaac Newton proposed the unthinkable theory that Earth and the other planets actually revolved around the Sun. This engaging book chronicles the beginning of the modern age of astronomy, then follows later discoveries, including NASA's current missions in space.

## Book Information

Series: Where Is?

Paperback: 112 pages

Publisher: Penguin Workshop (January 23, 2018)

Language: English

ISBN-10: 0515158186

ISBN-13: 978-0515158182

Shipping Weight: 4.6 ounces (View shipping rates and policies)

Average Customer Review: Be the first to review this item

Best Sellers Rank: #229,030 in Books (See Top 100 in Books) #151 in Books > Children's Books > Education & Reference > Science Studies > Earth Sciences #151 in Books > Children's Books > Education & Reference > Science Studies > Astronomy & Space > Astronomy #3505 in Books > Children's Books > Science, Nature & How It Works

Age Range: 8 - 12 years

Grade Level: 3 - 7

## Customer Reviews

Stephanie Sabol is a native of the Jersey Shore and a graduate of Boston College. She currently resides in Hoboken, New Jersey.
