Trigonometry Flash Cards: Memorize Values Of Trig Functions (sin, Cos, Tan) From 0 To 360 Degrees

Synopsis

This eBook includes 212 digital trigonometry flash cards in color (where color is available). Each flash card is decorated with triangles. These flash cards are specifically designed to help students memorize the sine, cosine, and tangent of 0, 30, 45, 60, 90, 120, 135, 150, 180, 210, 225, 240, 270, 300, 315, 330, and 360 degrees. For example, one flash card has $\cos(120)$ followed by the answer, $\cos(120) = -1/2$. All of the answers are written as reduced fractions with rationalized denominators (except when the answer is a whole number). All of the angles are expressed in degrees. The first set of 102 flash cards has the problems $\sin(0)$ thru $\tan(360)$ in order. The first half of this eBook is designed for students who are still memorizing the values of these trig functions. The second set of 102 flash cards has the problems $\sin(0)$ thru $\tan(360)$ shuffled. The second half of this eBook is designed for students who have attempted to memorize the values of these trig functions, and who need to test their mastery of it. There are a few flash cards at the beginning that remind you what the definitions of sine, cosine, and tangent mean in relation to a general right triangle. There is also one flash card near the beginning that has the sign of sine, cosine, and tangent in each quadrant. Some math and physics teachers require students to memorize the basic trig functions of the common angles from 0 to 360 degrees. Some standardized tests require this of students, also. For example, the MCAT is closed calculator and involves trig, and some of the problems require taking a sine, cosine, or tangent of an angle like 120 degrees. It's also useful to know these common trig values when working on a back-of-the-envelope calculation with a colleague during lunch, for example. Each flash card appears as its own picture on its own page. All of the flash cards come in pairs: First comes the problem flash card, followed by the corresponding answer flash card. The answer flash card reminds you what the problem was. So first you see the problem, and then you check your answer immediately. This eBook reads like a book. It is not a program or a game. It does not use a random number generator. The flash cards do look like ordinary flashcards (and they are in color and are decorated with triangles). The first half of this eBook has the flash cards in order to help memorize the trig values. The second half are shuffled to help test how well the trig values have been memorized. The shuffled cards will always appear in the same order.

Book Information

File Size: 18217 KB

Print Length: 214 pages

Publisher: Digital Math Fluency (February 1, 2012)

Publication Date: February 1, 2012

Customer Reviews

The flash cards are a great study aide. The equations are given on one page and then the answers on the next. The cards are presented in order in the first part and then in a shuffled order in the second part. You cannot change the order of the flashcards. Even with that limitation, it's still a very helpful tool to memorize trig values.

Wish these cards were randomized so I can quiz myself on trig formulas every now and then. I'm a mathematics major and I'm always forgetting my trig values! These helped me memorize and review them.

I dont even remember getting these!

Nothing more than triangle relationships. Not educational unless you want to learn all of the Oscar Had A Heap Of Apples .
