I am in an on-line Peds/adolescent Psych CNS program. I happened to see this book either here or when searching for references. Anyway, it has great info, all in one place. The section on drugs includes a chart with many of the common meds given as well as what type of monitoring (Ht, Wt, BMI, Labs, EKG) is needed and how often. I haven't read through the whole book (it is big) but what I have looked at has been great. I am so happy that I stumbled across this book. I would highly recommend it.

I am a univ prof and this is required reading for my students
