P. Kumar Mehta, Ph.D., is Professor Emeritus, Civil and Environmental Engineering, at the University of California at Berkeley. The recipient of the Berkeley Citationâ •the highest honor for contributions to his field and to the University--Dr. Mehta is an Honorary Member of the American Concrete Institute (ACI) and is a member of its Committee on Sustainable Development. Paulo J. M. Monteiro, Ph.D., is Roy W. Carlson Distinguished Professor, Department of Civil Engineering,

University of California at Berkeley and Faculty Scientist, Department of Materials, Lawrence Berkeley Laboratory. Dr. Monteiro is a Member of the American Society of Civil Engineers (ASCE) and of the American Concrete Institute (ACI). He has authored and co-authored numerous journal articles, conference proceedings, and reports in addition to having co-authored the Second and Third editions of Concrete: Structure, Properties, and Materials.

My professor co-authored this book and I must say there's absolutely nothing wrong with this text. All examples, concepts and esoteric language is explained and it makes you dream about Concrete (it did for me).My suggestion is try to make a very simple way to identify key terms in each chapter and write that in the front of the chapter. For example, for strength chapter, write down the terms: w/c, ITZ, Agg size and grade, Agg Elastic Modulus, porosity and relate these terms to strength of concrete.

Complete book on the topic concrete made by scientists from Berkeley Engineering School the most important in the USA. A book to be owned by concrete technologists.

Great reference.

Excellent book. Heavy technical stuff has been presented in a lucid and easy to read manner.

Just the best book so far about concrete. Everything you need to know is written in this fantastic compilation. There is just one negative thing: the price.

I'm satisfied with the book.

Complete set of concrete knowledge! If you want to learn concrete, that's the book.
